

# Healthy Teeth. Happy Smiles!

## Preventative Dental Care in Snohomish County for our low-income families.

United Way of Snohomish County has partnered with Best Dental Help, a mobile dental clinic operating in Washington State. Best Dental Help visits elementary schools to teach students about the importance of dental cleanings, offer check-ups and place sealants on children whose families have opted for care. **While most children have some level of access to healthcare, many families that have health insurance do not have dental coverage. Best Dental Help believes that by placing sealants on teeth at the elementary level, they can set children up for a lifetime of healthy teeth**

### Dental Screenings

Professional care by licensed hygienists in a clinic-like setting means the best care is provided to all children seen.

### No Cost to Families

Families who opt in are seen at no cost to them, regardless of income. Insurance is billed ONLY if they provide it to BDH.

### Preventative Care

Screenings include education, cleanings, fluoride treatments and placement of sealants if none are present.

### Mobile Clinic Comes to Them

The BDH mobile clinic comes to the school, providing families easier access to care without taking kids away from campus.

**\$480**

Sealant placement cost per child

Sealants can cost up to \$60 per tooth out of pocket. For low-income families in our community, this is a cost many cannot afford.
